## HEAD MEASURING PROCEDURE

Use tape measure and caliper to make the following measurements.

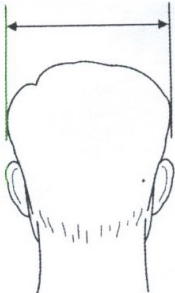

**Step 1.** Operator *must* be seated in upright position.

**Step 2.** Measure the maximum head length between the brow ridge and the back of the head. Measurement is best made with a caliper. If caliper is not available, an approximate measurement can be made using a tape measure aligned with the front and back of head as shown. Record size measured.

Arrows denote the proper alignment of the caliper or tape measure.

**Step 3.** Measure the maximum head width above the ears from the widest point between the left and right side of the head. Measurement is best made with a caliper. If no caliper is available, an approximate measurement can be made using a tape measure aligned with each side of head as shown. Record size measured.

Arrows denote the proper alignment of the caliper or tape measure.

**Step 4.** Measure the maximum head circumference. Record size measured.

Operator sits erect with head level. Measure circumference by passing tape measure just above the bony eyebrow ridges of the forehead and above both ears. The tape measure must be pulled tight.

**Step 5.** Using the chart below, select the helmet size based on the *largest* of the three (3) measurements.

**NOTE:** *If any measurement falls on the dividing line between sizes, select the larger size.*

## HEAD/SHELL SIZING CHART

HELMET SHELL	HEAD LENGTH	HEAD WIDTH	HEAD CIRCUMFERENCE
Small Helmet Shell	Up to 7 ¼" (184mm)	Up to 6 ½" (162mm)	Up to 21 ¼" (538mm)
Medium Helmet Shell	From 7 ¼" (184mm) to 7 ¾" (198mm)		From 21 ¼" (238mm) to 22 ½" (573mm)
Large Helmet Shell	From 7 ¾" (198mm) to 8 ¼" (210mm)		From 22 ½" (573mm) to 23 ½" (597mm)
Extra-Large Helmet Shell	8 ¼" (210mm) and over	6 ½" (162mm) and over	23 ½" (597mm) and over
